

GenComm Introduces New Wireless Base Station Analyzer

Seoul, Korea, April 26, 2010 – GenComm today announced the latest version of its Base Station Analyzer, the JD7105B, a multifunction solution that integrates spectrum, cable and antenna, interference, E1/T1, and signal analysis; covering wireless technologies from 2G to 4G including GSM/GPRS/EDGE, CDMA/EVDO, WCDMA/HSDPA, TD-SCDMA, WiMAX, and LTE.

The JD7105B offers performance and affordability making it the industry's optimal field testing and maintenance solution for all wireless base stations.

"The JD7105B base station analyzer has a superior performance and enhanced functionality making installation, acceptance and maintenance practices easy and quick to perform", said Eduardo Inzunza, vice president of international sales and marketing at GenComm. "We take our customers very seriously, and the JD7105B reflects most of their recommendations".

The new design of the JD7105B has several improvements, from its mechanical enclosure complying with MIL-PRF-28800F Class 2 specification, to its extended frequency range up to 7.2GHz.

The JD7105B is yet another significant achievement of GenComm that goes beyond the basic field requirements, offering unique functionality that expedites field testing. For example in CDMA and UMTS it has incorporated a code strength indicator and spread factor identifiers, in the evolution of EVDO it was implemented Rev. B demodulation, and in LTE it has the most comprehensive measurement parameters.

About GenComm

GenComm is committed to create optimal solutions for customers, providing superior value through engineering excellence and efficient operations. GenComm is a leader provider of test & measurement solutions for wireless networks worldwide. GenComm was incorporated in November, 2001 in Seoul, South Korea.
